

5

supply module, a memory module, a bluetooth module, a GPS module, a MP3 module and an adjustable belt module.

4. The chain-shaped foldable cellphone as cited in claim 1, wherein the first or second expansible module is selected from the group consisting of a digital camera module, a power supply module, a memory module, a bluetooth module, a GPS module, a MP3 module and an adjustable belt module.

5. A chain-shaped foldable cellphone, comprising:

a mainframe module for receiving or transmitting information;

a display module for displaying the information received or transmitted by the mainframe module; and

a first dual-spindle connecting block for pivotally connecting spindles respectively to the mainframe module and the display module,

6

wherein a first end of the mainframe module or the display module is further pivotally connected to a first spindle of a second dual-spindle connecting block, and a second spindle of the second dual-spindle connecting block is pivotally connected to a first extensible module, and

wherein the first extensible module is connected to a first expansible module, which functions as a complementary connector, and the first expansible module is further connected to a third dual-spindle connecting block, and a second expansible module or a second extensible module is further connected.
